

JORIS

LI40684

DESCRIPTION

Work boot designed to provide maximum safety and protection during demanding activities in harsh environments. Made of robust, water-repellent full-grain leather and equipped with an integrated PU toecap, this boot provides an effective barrier against water and moisture. The synthetic fur lining keeps the foot warm and dry even in harsh weather conditions. Equipped with a lightweight and durable CompoToe Composite toe cap, it protects the foot from shocks and crushing, while the completely metal-free SAFE-System puncture prevention system offers additional safety from sharp materials. Comfort is ensured by the breathable and antibacterial anatomical footbed made of soft polyurethane and the BASF elastopane insole. The PU/PU sole provides excellent stability, high wear resistance and non-slip grip combined with the thermal resistance of the CI requirement. S3S CI FO SR certification, available in sizes 38 to 48.
