WFU463BC

DESCRIPTION

Technical work jacket designed to provide protection, comfort and practicality during outdoor professional activities and in changing weather conditions.
Made from a two-layer fabric consisting of 100% recycled polyester, 150 g/m², with PU lamination, it ensures high performance against rain and moisture thanks to its 10,000 mm waterproof rating and excellent breathability of 10,000 g/m²/24h, helping maintain comfort even during the most demanding working days.
Fully taped seams and the waterproof central zip help create an effective barrier against water and wind. The two front pockets and the vertical chest pocket, all fitted with waterproof zips, keep tools and personal items within easy reach while protecting them from moisture.
The fixed hood, adjustable with a drawstring, and the cuffs with Velcro fastening allow the fit to be adapted to different working requirements, improving protection against the elements.
The carbon-effect inserts on the chest and hood give the garment a modern, professional look, ideal for those looking for high-performance workwear without compromising on style.
