

ANVIL

WMP250NB

DESCRIPTION

The ANVIL multi-protective trousers are designed to ensure maximum protection and comfort for operators working in high-risk environments, where additional visibility is not required. Made from high-performance modacrylic fabric, they provide permanent inherent protection against heat and flames, maintaining consistent performance over time.

This non-reflective version is ideal for applications where protection takes priority over high visibility. The garment features a chemical protective treatment, enhancing safety in complex industrial environments.

Durable and functional, the ANVIL trousers are equipped with two large cargo pockets with FR Velcro® closure and FR reflective details, front pockets with FR plastic buttons, and rear pockets with Velcro® closure and reflective inserts. The YKK® zipper combined with an invisible FR button ensures reliability and ease of use even under demanding working conditions.

The ergonomic design includes a raised back waist, preventing lower back exposure during movements and bending. Details such as the FR silicone logo and printed flame-resistant pictograms highlight the garment's strong focus on safety and regulatory compliance.
