BULWARK

WMP251NB

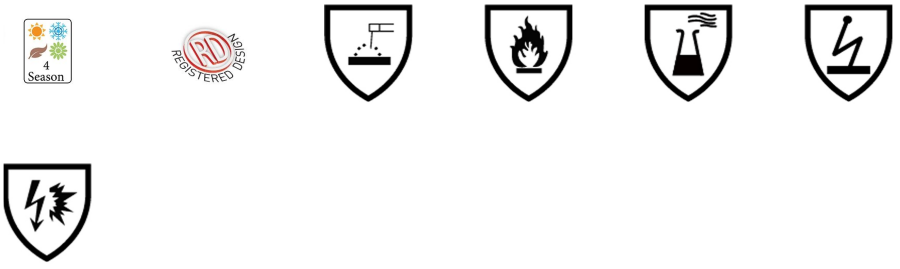

DESCRIPTION

The Bulwark pentavalent jacket is designed to provide maximum protection and comfort in high-risk professional environments. Made from modacrylic fabric with permanent intrinsic protection, it ensures long-lasting safety without the need for additional treatments.
Free from reflective bands, it is ideal for environments where high-visibility requirements are not necessary, while still maintaining high protection standards thanks to chemical risk treatment and flame-retardant materials, including FR logos and pictograms.
The structure is solid and functional: double-needle reinforced seams, a zip closure covered by a protective flap, and adjustable cuffs with FR buttons. Two large front pockets with covered closure and FR Velcro offer practicality and safety, while integrated loops allow the attachment of communication devices and detectors.
The design is completed by a back hem extended by 4 cm, designed to ensure optimal coverage of the lower back during movement. A reliable and durable work jacket, engineered to support you safely throughout the working day.
