

RAINOX

WFU464BC

DESCRIPTION

Technical work over-trousers designed to provide effective protection against rain, wind and moisture, ensuring practicality and quick use in all working conditions.
Made from the same fabric as the matching PROTEXA jacket, a 2-layer fabric made of 100% recycled polyester, 150 g/m^2, with **PU lamination**, they provide a high level of waterproof protection of 10,000 mm and breathability of 10,000 g/m^2/24h, maintaining the right balance between protection and comfort throughout the working day.
The elasticated waist ensures a comfortable fit and excellent freedom of movement. The two front pass-through pockets with waterproof zips provide quick access to the garments worn underneath and essential items, while protecting them from water.
The waterproof side zips allow the over-trousers to be put on and removed quickly, even over shoes or safety footwear, making them particularly practical in the event of sudden changes in weather conditions.
For increased durability in areas most exposed to wear, the lower leg features abrasion-resistant reinforcement fabric. The Velcro adjustment at the hem also allows the leg width to be adapted to different working requirements, improving both protection and comfort.
